## **AUTOMATING YOUR POOL SANITATION**

Tru Blu Pools recommends 4 automated alternatives to standard swimming pool sanitizers. They are the Ultra Pure Ozonator, the Nature II Express, the Aqua Rite salt system and the Rainbow 320 automated chlorinator.

The Ultra Pure Ozonator is a chemical free method that takes body oils and fluids and releases them in the air. This system is constantly shocking your pool while your equipment is running. It takes on 70% of the sanitation work load.

The Nature II Express is also chemical free and uses minerals to trap and assist in killing bacteria in the pool. Using both the Nature II and the Ultra Pure Ozonator, you can reduce the amount of chlorine needed for your pool. You should notice a difference in the softness of the water and the effects on your skin.

Even with these two systems, you are still going to have to sanitize the pool somewhat. One option is the Aqua Rite Salt System. This system converts regular salt into pure chlorine. The salt system seems to be easier on the skin and eyes verses regular chlorine tablets and shock. Although the salt system is expensive to set up, the salt used to put in the pool is relatively inexpensive.

Another option is the Rainbow 320. This is a relatively inexpensive unit that holds chlorine tablets and releases a certain amount of chlorine constantly into the pool. If you are using the Ultra Pure Ozonator and the Nature II Express, you should be able to use less chlorine with this system.

Please call us for installation pricing on each of these units.
